

Vision and mission statement

WAIGO is a company that operates in the field of logistics, software development and services.

Our vision is to improve logistics market in EU. To achieve this, we use our platform which saves time and money of SHIPPERS as well as it brings higher revenue to CARRIERS. The platform focuses on higher efficiency, transparency and flexibility.

WAIGO creates the transparent online platform - freight marketplace where supply of CARRIERS meets demand of SHIPPERS. The access to the market is through our web and mobile application. The application connects SHIPPERS directly with CARRIERS (and their truck drivers). This connection provides the access to available freight capacity. Thanks to this, it is not necessary to use services of classic middlemen anymore. The advantages of the application are mainly time efficiency, cost reduction and therefore higher revenue. It takes care about transport contract according to international standards, invoicing, payments and other needed documents as well. There is administration of shipments and vehicle fleet as matter of course. Our application is intended for companies of all sizes. The application is an opportunity for SMEs to have the same access to the market as big players have. The application is user-friendly, accessible anywhere at any time.
